PROFILE

Chris is conversant in a large number of languages and stacks. He is adept at selecting the best technology for his team and drawing insights from colleagues. With experience working closely with security research teams and regularly attending Defcon, he stays security conscious and diligent about aligning business, security, and maintenance needs.

EXPERIENCE

Sr Software Engineer

2018 – 2026

Sonatype

Fulton, MD

- Led development of new products, including Sonatype Developer, projected to generate more than \$43M in revenue.
- Top-tier contributor to several mission-critical projects including: *Lift*, a flagship product that provided a bill of materials and static code analysis to expose vulnerabilities and license compliance issues; and *Lifecycle*, an industry-leading platform for software composition analysis.
- Contributed heavily to both Java and React code in *Nexus Repository Manager*, a widely used artifact repository manager, capable of handling more than 6,000 requests/second on a single instance.
- Worked closely with principal and staff engineers to align product specs and technical vision for long-term stability utilizing the PDLC framework.
- Reduced time to fetch important data for a feature from 2 minutes to 2 seconds.
- Developed code in Java, Kotlin, Haskell, Scala, and React to integrate the complicated architecture and code base of an acquired startup into Sonatype's offerings.
- Interviewed engineering candidates and mentored junior engineers and interns.
- Led ML-based research prototypes during Sonatype's Innovation Week which were adopted by the Security Research team.

Full Stack Developer | Lead Backend Developer

2013 – 2018

airSpring Software

Lexington, KY

- Led development of novel features for airSpring, a Node.js application enabling customers to build web apps using low-code, drag-and-drop interface.
- Thrived in a high-pressure startup setting, handling diverse responsibilities including design, frontend, backend, and architecture.
- Created storage and synchronization functionality for offline use, an application packaging system for deployment across multiple server instances, and a web API builder for custom APIs.

Senior .Net Consultant

2011 – 2013

Aspect Software

Chelmsford, MA

- Worked onsite with a high-touch client to design and implement new features and integrations using C#/NET, SharePoint, Active Directory, and SQL.
- Enhanced and managed client applications.

- Engaged in daily standups and development team meetings.

Programmer

The Legislative Research Commission

2008 – 2011

Frankfort, KY

- Delivered line-of-business applications for the state legislature, providing services such as bill drafting, statute search, committee appointment, and printing of session minutes.

VOLUNTEER WORK

Infinite Industries

Chris is passionate about the intersection of art and technology. Since 2017 he has collaborated with UK professor of fine arts, Dima Strakovsky, to build [Infinite Industries](#), a non-profit technology platform that promotes musicians and art events in Kentucky.

PERSONAL PROJECTS

- [Fong Phone](#): A synthesizer in your pocket intended for performance art, soundscapes, and teasing pets, published to IOS and Android app stores
- [Every Picture Tells a Story](#): A gallery piece that converts images to ASCII art containing fragments of text in real time, presented to the viewer as an interactive mirror of words
- [AI Document Query System](#): This is an experiment with context engineering, exploring the use of LLMs with small context windows to query large documents locally, in a resource constrained environment
- And many more: chriswininger.com | wegotrats.com

EDUCATION

BA in Computer Science; BA in Russian Language

Indiana University, Bloomington, IN

2002 – 2006

CIEE Study Abroad

Saint Petersburg State University, Saint Petersburg, Russia

2005

SKILLS

Java, Node.js, JavaScript/TypeScript, React, Kotlin, Vue, Angular, Python, C#, C/C++, Ruby on Rails, Postgres, SQL, NoSql, Jenkins, Github Actions, Selenium, Playwright, Cypress, Docker, Kubernetes, Terraform, AWS, Azure, Nginx, Apache, Linux, prompt engineering, Keras, Spring Boot, Dropwizard, Guice, Spring AI, Next.js, Flyway, Liquibase, Redis, Memcached
